Correction for 'Transition metal-catalyzed direct remote C–H functionalization of alkyl groups via  $C(sp^3)$ – H bond activation' by Guanyinsheng Qiu, et al., Org. Chem. Front., 2015, **2**, 169–178.

In this review, two important contributions reported by Sahoo and co-workers were not included in the text.<sup>1,2</sup> As part of the scientific research community, we should respect every contribution. The details, which should have been included on page 8 of the original manuscript, are as follows.

In 2012, Sahoo and co-workers developed a novel and reusable directing group, *S*-methyl-*S*-2-pyridyl-sulfoximine (MPyS). This directing group could facilitate acyloxylation of primary  $\beta$ -Csp<sup>3</sup>-H bonds under mild conditions. Interestingly, sequential bromination/chlorination and acetoxylation were achieved with the assistance of the MPyS group by slightly changing the reaction conditions.

Scheme 29 MPyS-assisted C-H functionalization.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
