Correction for 'Unexpected formation of 1,2- and 1,4-bismethoxyl $Sc_3N@I_h$-C_{80} derivatives *via* regioselective anion addition: an unambiguous structural identification and mechanism study' by Yajing Hu *et al.*, *Chem. Sci.*, 2021, DOI: 10.1039/d1sc01178b.

The authors regret a mistake in Fig. 3, showing the ^{13}C NMR spectrum of product **1**. In the ^{13}C NMR spectrum of **1**, the peaks corresponding to the sp^3 carbons of the fullerene cage and the methoxy groups were wrongly identified. The correct version of Fig. 3 is shown below.

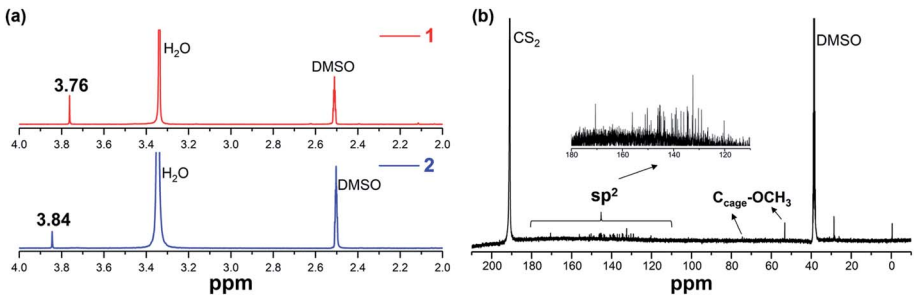

Fig. 3 (a) ^1H NMR spectra of **1** and **2** and (b) ^{13}C NMR spectrum of **1** recorded in CS_2 with DMSO-d_6 as the external lock solvent.

The description of the ^{13}C NMR spectrum in the Results and discussion section should therefore read: Resonance for the two sp^3 I_h-C_{80} cage-carbons bonded to the OCH_3 groups appears at 74.49 ppm, while the peak for the two sp^3 OCH_3 carbons appears at 53.76 ppm.

The description of the ^{13}C NMR results in the Experimental section should therefore read: 74.49 (2C, sp^3, C_{cage}–OCH_3), 53.76 ppm (2C, sp^3, –OCH_3).

These corrections do not influence any conclusions of the original paper.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
