Correction: Estimating NH_3 and $PM_{2.5}$ emissions from the Australia mega wildfires and the impact of plume transport on air quality in Australia and New Zealand

Ece Ari Akdemir, William H. Battye, Casey Bray Myers* and Viney P. Aneja

DOI: 10.1039/d2ea90015g

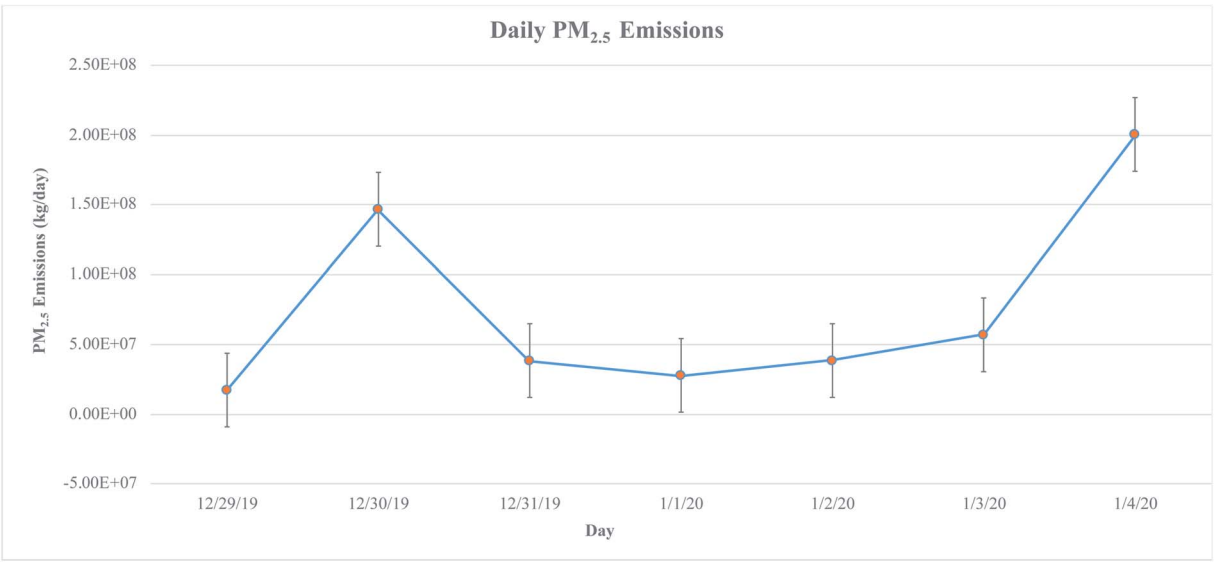
rsc.li/esatmospheres

Correction for 'Estimating NH_3 and $PM_{2.5}$ emissions from the Australia mega wildfires and the impact of plume transport on air quality in Australia and New Zealand' by Ece Ari Akdemir *et al.*, *Environ. Sci.: Atmos.*, 2022, https://doi.org/10.1039/d1ea00100k.

The authors regret that there were some typographical errors in Fig. 2 of the original article.

First, the *y*-axis should read "Emission" instead of "concentration". Secondly, the dates that make up the *x*-axis of the top image should conform to the dates in the bottom image. The correct figure is given here:

Department of Marine, Earth, and Atmospheric Sciences, North Carolina State University, Raleigh, NC, 27695, USA. E-mail: cdbray@ncsu.edu



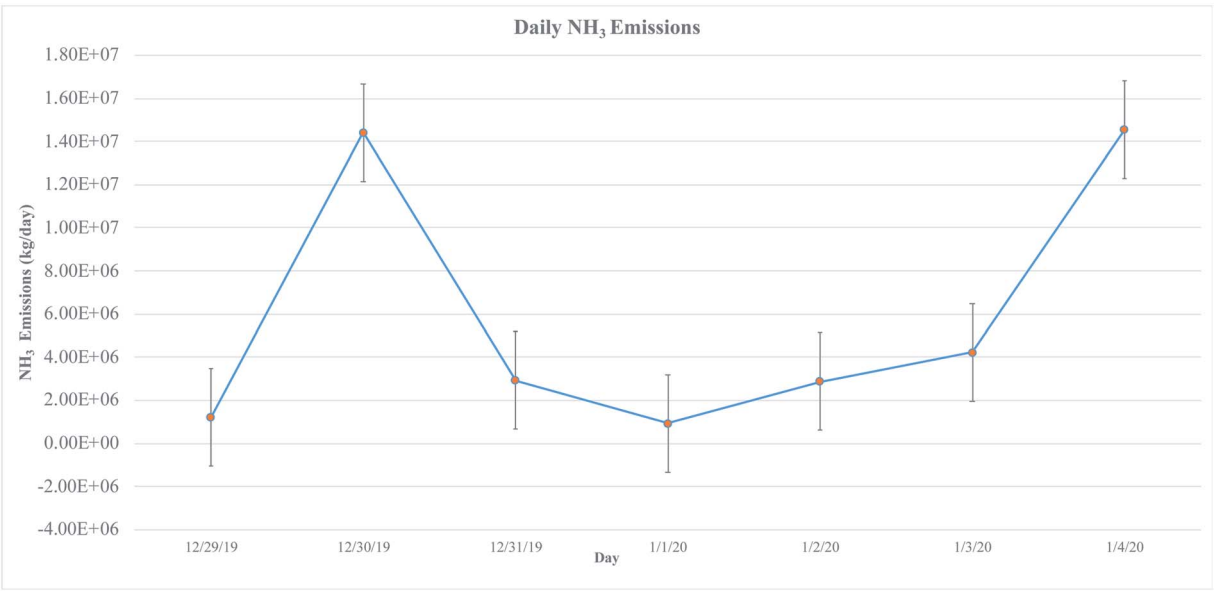


Fig. 2 Daily $PM_{2.5}$ emissions and NH_3 emissions in Southeast Australia during the study period (December 29, 2019 – January 4, 2020). The circles represent $PM_{2.5}$ and NH_3 emissions as kg per day. The black vertical bars in the figure represent ± 1SD.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
