Correction: Constructing chiral MOFs by functionalizing 4,2′:6′,4′′-terpyridine with long-chain alkoxy domains: examples of *dia* nets

Y. Maximilian Klein,[a] Alessandro Prescimone,[a] Mateusz B. Pitak,[b] Simon J. Coles,[b] Edwin C. Constable[a] and Catherine E. Housecroft*[a]

Correction for 'Constructing chiral MOFs by functionalizing 4,2′:6′,4′′-terpyridine with long-chain alkoxy domains: examples of *dia* nets' by Y. Maximilian Klein *et al.*, CrystEngComm, 2016, **18**, 4704–4707, https://doi.org/10.1039/C6CE00939E.

The authors regret an error in the assignment of the net descriptor. In the original paper, the identification of a 6^6 cage unit as the building block in the network led to the assignment of a **neb** net. The so-labelled "fundamental 6^6 unit" (shown in Fig. 3 and 5 of the paper) is actually two 6^4 units connected through a shared 6-membered ring.

Throughout the paper, including the title, **neb** should be replaced by **dia**. The word "rare" to describe the nets should also be removed from the title (as reflected in the title as shown here).

The error was brought to our attention by the assignment of a **dia** net to a related series of structures.[1]

We acknowledge informative discussion with Stuart Batten.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
